San Jose, CA | (408) 674 2088 | balagarbhuvan@gmail.com | [LinkedIn](#) | [Github](#)

## EDUCATION

**Chapman University**, Orange, CA

**May 2026**

**Degree:** Bachelor of Science in Data Science, Minor in Law & Liberal Arts

**GPA: 3.7**

**Relevant Coursework:** Data Structures & Algorithms, Machine Learning, Artificial Intelligence, Database Systems

**Awards:** Provost's List, Dean's List

## SKILLS

**Programming & Tools:** Python, SQL, Git, Docker, Copilot

**Machine Learning:** scikit-learn, TensorFlow, Pytorch

**Data Analysis & Visualization:** Pandas, NumPy, Tableau, Excel, Alteryx

**Analytical Methods:** Data cleaning, validation, EDA, feature engineering, handling missing values & outliers, statistical analysis, model evaluation, hypothesis testing, business analytics

## WORK EXPERIENCE

**Student Researcher – Clinical/Biomedical Data Science** | *Chapman University*

**Sept 2025 - Present**

- Designed and implemented end-to-end ML pipelines for noisy, high-frequency time-series sensor data, including data cleaning, normalization, and feature extraction
- Developed and trained a convolutional neural network (CNN) to classify movement patterns across populations, achieving a ROC-AUC of 0.67 on held-out subject-wise validation data
- Conducted controlled experiments across model architectures and feature representations, comparing classical ML and CNN-based approaches to inform model selection under real-world constraints
- Evaluated and iterated on model performance using ROC-AUC and precision/recall, analyzing robustness and generalization on real-world, non-ideal data

**AI Trainer (Contract)** | *Data Annotation*

**Summer 2025 - Present**

- Evaluated large language model outputs for accuracy, consistency, and reasoning quality using structured evaluation frameworks, helping ensure reliable behavior in real-world scenarios
- Identified recurring error patterns and edge cases through systematic review of model responses, exposing weaknesses that were not visible through aggregate metrics alone
- Translated qualitative observations and quantitative trends into actionable feedback for engineering teams, contributing to iterative improvements in model performance and consistency

## PROJECT EXPERIENCE

**LA Car Demographics Analytics** | *Applied Business Analytics*

**Spring 2025**

- Analyzed 500k+ records of demographic and vehicle data by cleaning and validating multiple sources, creating a consistent dataset for analysis
- Performed feature engineering and segmentation analysis to identify key drivers of purchasing behavior, including income, age, and fuel type
- Built Tableau dashboards to visualize trends, supporting data-driven inventory and market decisions

**Social Media Engagement Analytics** | *Applied Business Analytics*

**Spring 2025**

- Designed exploratory data pipelines to clean, validate, and analyze engagement data across platforms
- Built interactive dashboards to investigate behavioral patterns, enabling rapid iteration on hypotheses

## LEADERSHIP EXPERIENCE

**Data Analytics Association President** | *Chapman Student Organization*

**Sept. 2023 - Present**

- Led workshops and speaker events focused on applied data science, machine learning, and real-world analytics
- Coordinated with students and external speakers to foster a collaborative technical community

**Tutor, Supplemental Instruction Leader** | *Chapman University*

**Sept 2022 – May 2023**

- Tutored Data Structures, Algorithms, and Statistical Models; guided students in problem-solving strategies for coursework
- Led Calculus I review sessions, translating complex concepts into structured, accessible explanations.

Something like:

**Resume Intelligence Platform** / *Personal Project (In Progress)*

- Designing and developing a full-stack application that tailors resumes to job descriptions while preserving accuracy and authenticity of candidate experience
- Built a document analysis pipeline using TF-IDF, RAKE, and semantic embeddings to identify critical skills, keywords, and domain-specific requirements from job postings
- Developed resume and supplemental-experience ingestion workflows to incorporate relevant experience not present on the base resume
- Implemented a web-based user interface for resume upload, job description analysis, and generated resume review
- Currently integrating LLM-based resume generation and PDF formatting preservation to maintain layout consistency and page constraints
